

Protector™ Label Printer Enclosures

Features

- Nema-4X class stainless steel construction for harsh environments
- Rugged top-hinged design (standard unit) provides easy access for printing
- Large side door allows quick label restocking, service and maintenance
- All entry points sealed with rubber gaskets
- Several sizes available

Business Benefits

- Extends printer life
- Lower maintenance costs
- Sanitation-friendly design allows thorough cleaning to prevent bacteria build-up

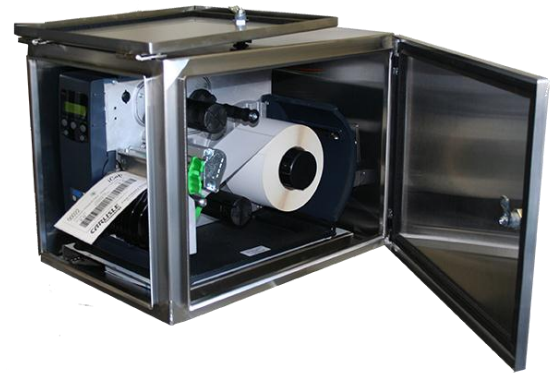

Protecting your printer investment

For label printing applications in harsh working environments, Carlisle Technology offers the Protector™ printer enclosure. The Protector™ provides wash-down and dust protection for thermal label printers, extending their life and reducing maintenance costs. It is at home in industries where ergonomics, maintenance, and sanitation are of highest priority: meat, poultry, and fish processing, food packaging, pharmaceuticals, and chemical production.

Rugged construction

With its sealed NEMA 4X stainless steel construction, the Protector™ enclosure is built from the ground up for high performance in corrosive, dusty, wet, hot and cold environments. It is suitable for environments such as:

- Meat processing – receiving and primary processing (high impact with dirt and debris)
- Food processing – cut floor (high intensity cleaning)
- Packaging and Shipping areas (dusty and high impact)
- Freezers (may require optional heater and insulation)

Sanitation-friendly

The Protector™ enclosure promotes a more sanitary environment by allowing regular intensive cleaning procedures. Both front and side doors are latched securely before high-pressure cleaning, thoroughly protecting the printer from water and contamination.

Maintenance-friendly

The Protector™ printer enclosure offers fast and easy access to the printer for label restocking, maintenance and repair purposes.

Universal sizing / Options

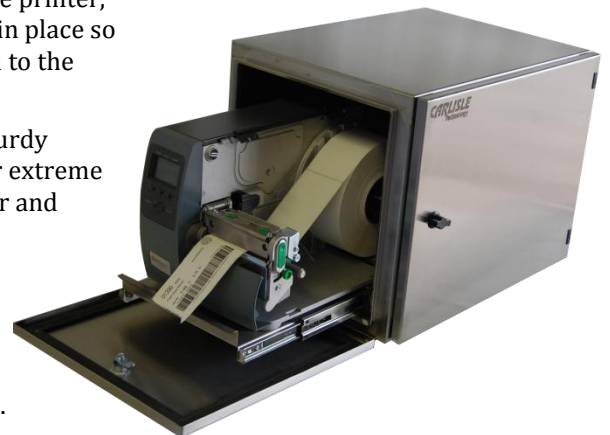

Protector™ printer enclosures are compatible with a wide variety of bar code printers from major printer manufacturers, including Datamax-O'Neil, Zebra, and Intermec.

A printer-specific metal deck supports the printer, ensuring that the printer remains firmly in place so that the labels are consistently presented to the operator or label applicator.

Carlisle also manufactures a variety of sturdy stands for printers and workstations. For extreme environments, an optional internal heater and insulation add-on is available.

Competitively priced

The Protector™ enclosure, paired with a standard bar code printer is an economical wash-down printing solution.

Additional value is realized through extending the life of your printer as well as through streamlining your sanitation processes.

Warranty

Carlisle Technology stands behind the quality of the Protector™ printer enclosure with a 1 year warranty against all manufacturing defects.

Specifications

Design

- Moisture resistant, NEMA-4X class
- Designed to meet AMI sanitary design guidelines for food safety
- Top-hinged front door standard. Bottom-hinged model available for some applications

Construction

- 304 stainless steel fabrication
- Dimensions: 16"H x 15"W x 21.125"D
- Mounting: stainless steel bottom mounts for securing to work-stands
- Shipping weight: 48 lbs (22 kg)

Connectivity

- Universal rear-mounted gasketed cable entry port

About Carlisle Technology

With 25 years of experience installing successful in-plant solutions for the North American food processing industry, we understand the business.

We provide configurable, turn-key solutions to address *productivity, visibility and traceability*.

Customers large and small choose Carlisle when reliability is critical. We design robust software, and complement it with 24/7 service expertise to keep your plant running.
