

PRESS RELEASE

CONFIGURABLE WEIGH/LABEL SOFTWARE

July, 2009

Carlisle Technology announces the release of iCap, its next generation configurable weigh/label/record software for Windows.

With intuitive screen layouts and innovative soft hot keys to create highly productive, user-friendly interfaces, operators can easily handle mixed or batch products with no interruption of work flow. iCap is extremely configurable, allowing instant, on-the-spot changes to be made.

iCap is designed to be the control software for various weigh/print operations ranging from manual and static weighing to fully automated in-motion weigh with print and apply. The higher-end solutions involve interfacing with numerous devices such as bar code scanners, metal detectors, and conveyor controls. Pallet building can be done right off the line, even with mixed products.

Fully compatible with Carlisle's Informer Plant Visibility Suite, data from iCap stations is monitored in real-time to enable plant personnel and managers to make better business decisions. Furthermore, with Informer modules such as Label Design and Deployment, iCap stations can be managed from a central location for a plant or enterprise.

Several other capabilities of iCap include in-plant production and order monitoring, work-in-process (WIP) tracking, kill floor control for carcass weighing, inspection and grading, and SPC for piece weight sampling and analysis. To address the critical nature of the production process, iCap will continue to operate even if network communications are compromised.

iCap replaces Carlisle's highly successful Omni-Weigh software which has thousands of installations.

CARLISLE TECHNOLOGY Background Information

Founded in 1985, Carlisle Technology is a leader in innovative technology solutions primarily for the food industry. Solutions consist of standard, configurable software, specialized equipment, and integration services. Software offerings include iCap™, the most capable program available for weighing, labeling and plant process control. Other software developed by the company includes Informer™ Plant Visibility Suite which offers plant visibility and control, as well as Insight™ for warehouse management. Carlisle Technology manufactures and offers specialized equipment for data collection that includes wash-down touch screen workstations, in-motion scales, printer applicators, and other devices.

Carlisle Technology, a Certified Microsoft Solution Partner, is a privately held company with headquarters in Burlington, ON, Canada, and has installations across North America. Contact: (905) 332-5757; sales@carlisletechnology.com; www.carlisletechnology.com
