Animal Receiving Meat Traceability Software

Schedule and receive animals with Symphony's Live Animal Receiving application. This application has functionality for both standard kill and custom kill animals. Configurable fees can be assigned to custom kill animals upon receiving. Animal categories and animal types can be defined in Symphony. This allows Symphony to handle the receiving of all types of animals like beef, pork, goats, sheep, and other exotic animals. Symphony is also able to weigh receiving lots and print lot tags for lot tracking.

- Receive Standard or Mixed Lots
- Assign Lots as Custom or Standard Kill
- Assign Custom Kill Charges and Fees
- Configurable Animal Receiving and HACCP Questions
- Capture Receiving Lot Weights
- Animal Lot Tracking

Capture Key Lot Information

In the office or on the plant floor, a user can create a new animal receiving lot in Symphony. Symphony will track the vendor or customer, and how the animal was shipped to the facility. The receiving lot is marked as standard kill or custom kill, and custom kill fees are assigned as required. HACCP truck receiving questions can be answered if applicable. Then the user can indicate how many and which type of animals are being received. Same animal or mixed animal lots can be received through the application. Once the receiving lot is saved, Symphony can capture the weight of all the animals in the receiving lot, or it can simply just print a lot tracking tag for the receiving lot.

About Carlisle Technology

Since 1985, Carlisle Technology has provided integrated information solutions for the food processing industry. Carlisle's reputation is built on providing configurable, off-the-shelf software; tightly integrating it with high-quality hardware components; and standing behind the entire solution with full implementation and on-going support.
